

IN THE CLAIMS

Claim 1 (currently amended): A wall mount structure for an image display screen, comprising
at least one to a wall surface attachable supporting profile with a longitudinally extending
outwardly open through groove, ~~characterized in that~~ at the a rear side of the display screen
existing mounting holes are being used for attachment of interconnecting means by means of a screw
thread, said interconnecting means, during a sliding movement in a longitudinal direction of said at
least one supporting profile, being arranged to take up an interconnected condition with said at least
one supporting profile,

said interconnecting means including a first cylindrical part having a diameter exceeding a
width of said through groove, and with an at least partly surrounding groove arranged to grip at least
one vertically extending part that is in one piece with the at least one supporting profile.

Claim 2 (currently amended): The wall mount structure according to claim 1, ~~characterized in that~~
wherein a first stop means is arranged at the an end portion of the supporting profile whereagainst
the interconnecting means to be connected to the profile is ~~slided~~ slid during a mounting operation.

Claim 3 (currently amended): The wall mount structure according to claim 2, ~~characterized in that~~
wherein a second stop means is arranged attachable at the end portion of the supporting profile which
is opposed to the a location of the first stop means.

Claim 4 (original): The wall mount structure according to claim 3, ~~characterized in that~~ wherein
the ~~attachable~~ second stop means is of a lockable type.

Claim 5 (currently amended): The wall mount structure according to claim 1, ~~characterized in that~~
wherein two of the supporting profiles are arranged extending substantially horizontal at the wall
surface in a spaced relationship to each other corresponding to the a height relationship for existing
mounting holes at the rear side of the display screen (1).

Claim 6 (currently amended): The wall mount structure according to claim 1, ~~characterized in that~~ wherein two of the supporting profiles are arranged extending substantially vertical at the wall surface in a spaced relationship to each other corresponding to ~~the sideways~~ a sideways relationship for existing mounting holes at the rear side of the display screen.

Claim 7 (currently amended): The wall mount structure according to claim 5, ~~characterized in that~~ wherein the supporting profiles are arranged having a recess facilitating that in ~~the~~ an insertion direction for the interconnecting means leading interconnecting means receive engagement with the supporting profiles at a position more adjacent to ~~the~~ stop means than opposed end portions of the profiles.

Claim 8 (currently amended): The wall mount structure according to claim 1, ~~characterized in that~~ ~~the interconnecting means include~~ wherein a surrounding groove[,] is arranged to ~~grip at least one~~ vertically extending part of the supporting profiles, and to define a distance to the heads of the screws whereby the profiles are attachable against the wall surface.

Claim 9 (currently amended): The wall mount structure according to claim 1, ~~characterized in that~~ wherein the interconnecting means includes ~~a first part, a completely or partly surrounding groove,~~ a second part extending from ~~the~~ a first part in a direction towards the display screen, a through said parts ~~extending through hole,~~ and through ~~the~~ a hole extending screw, attachable at the mounting holes existing at the rear side of the display screen.

Claim 10 (currently amended): The wall mount structure according to claim 1, ~~characterized in that~~ wherein the profiles have a substantially U-shaped configuration with ~~the~~ free end portions bent over in a direction towards each other, thereby defining an outwardly open groove between the free edge end portions.
